AHSAN GULZAR

(MERN Stack Developer)

OBJECTIVE

Results-Oriented with a solid background in MongoDB, Express.js, React, and Node.js, I am a MERN Stack Developer looking to apply my abilities to create scalable and effective web apps. I am passionate about working with cross-functional teams to provide high-quality solutions, optimizing performance, and creating user-friendly interfaces.

SKILLS

- React.js
- Node.js
- Express.js
- MongoDB
- RESTful API Integration
- Responsive Web Design
- Tailwind CSS
- Redux

EXPERIENCE

B. JOB PORTAL WEBSITE
Front-end, Backend Development | Database Creation | API Integration

I created a website that allows employers to advertise job openings and allows job searchers to apply. I contributed to the backend (server and database) as well as the frontend (design and user interface). Additionally, I made the database to hold applications, user profiles, and job postings. In order to enhance functionality and manage data effectively, I also implemented APIs. A seamless and easy-to-use experience for companies and job seekers was the aim.

HOLOSHOPECOMMERCE WEBSITE
Frontend, Backend Development | API Integration | Redux | MongoDB

I created the eCommerce website, which allows customers to peruse items, put them in their carts, and complete transactions. For safe transactions and real-time data updates, I integrated APIs. Redux was utilized for state management in order to manage order tracking, cart functionality, and user authentication. The database used to safely store user information, goods, and orders was MongoDB. The goal of the project was to develop a responsive and smooth shopping experience.

EDUCATION

Bachelors in Information Technology 2021 -

2025 | Quaid-I-Azam University, Islamabad.

RELEVANT COURCES

1. React JS: YouTube
2. JavaScript: Udemy
3. Node, Express JS: YouTube
4. Redux: redux.js.org
5. MongoDB: Coursera
